

Climate Change Mitigation Advisory Group report November 2025

I recently attended an online information session about Retrofitting and the role of Cambridge Carbon Footprint's Open Eco Homes Team. It was an "introduction to retrofitting" but unfortunately the presenters assumed a lot of background knowledge. However, it might be worth contacting them should we wish to put on another event similar to the "What on Earth can Buckden do" one a few years ago. They can provide information such as lists of contractors and will project manage to ensure work is up to scratch.

I also joined the Great Collaboration Banter session on The Holme Valley's response to Kirklees new Local Plan. They have taken an interesting approach looking specifically at how any changes might affect Green Issues, Climate Change, Flood Risk and Health and Well-being. Their group includes representatives from business, schools and community groups including organisations such as Scouts and Guides and they are very pleased with the positive response they have had from Kirklees Council.

Bookings for the Repair Cafe are filling up nicely; we have 8 repairers attending.

Climate Change Mitigation Advsory Group, Councillor Madeline Fraser
